

LISTEN - LEARN - GO LIVE

The **Track & Trace User Academy** informs and supports your implementation of serialization and aggregation processes, starting with the gathering of first information up to the realization of the implementation. With this new initiative, we aim to accompany you throughout the whole life cycle. This practically oriented concept focuses completely on your individual requirements and, step by step, teaches you everything you need to successfully implement Track & Trace. Every step is covered, starting with the regulatory demands and diverse applications of systems up to insights into the onboarding-processes and the implementation into the production operation.

MUCH MORE THAN KNOW-HOW TRANSFER

We support you with a broad combination of market information, practical knowledge and implementation recommendations to sustain your delivery capacity and ensure compliance. In the event of capacity shortages, we can step in and support you due to quick onboarding procedures. You can choose, according to your user level, one of the following programs:

- **Site Reference Visit:** you will see how Track & Trace, from the serialization up to the complete aggregation, has been implemented in operation - first questions will be answered during the tour
- **Expert Program:** workshops, tailor-made to your needs, including discussion about requirements and the best course of action
- **System Training:** even during the implementation period we continuously support and guide you with our experience – from user to user

READY FOR THE WORLD MARKET WITH TWO STRONG PARTNERS

„Together, we pass on the experiences we have gained over the past few years.”

R-PHARM
Germany GmbH

The contract manufacturer R-Pharm Germany GmbH, a former production plant within the Pfizer Network, operates one of the most modern sites worldwide for manufacturing and packaging of pharmaceuticals and nutritional supplements. The full-service CDMO serializes and aggregates according to all known regulatory requirements since 2015. Nine packaging lines have been optimized for a flexible and quick operation. In this manner all worldwide specifications can be realized. R-Pharm also offers services in regards to formulation, development, manufacturing and packaging. More Information at www.r-pharm.de.

“What our customers appreciate about our Track & Traces solutions, is the continuous improvement of all system components and our long-term experience.” (Michael Unbehaun, Manager Engineering Site Projects, T&T)

METTLER TOLEDO PCE

Track & Trace

METTLER TOLEDO PCE manufactures and markets a wide range of solutions for quality control in the pharmaceutical industry, as well as complete systems for serialization and aggregation. The company is based in Zwingenberg in Hessen and has been part of the Mettler-Toledo group since 2011.

METTLER TOLEDO is the largest provider of end-of-line inspection systems used in the production and packaging of food, pharmaceuticals and other industries. Mettler-Toledo's leading brands of inspection systems are Garvens Checkweighers, Safeline X-ray inspection systems and metal detectors and CI-Vision optical control systems. For more information about Mettler-Toledo, see www.mt.com/pi.
